UCSB Healthcare Related Courses and Seminars

Seminars

**INT 75—Underserved Medicine**

Using service and problem-based learning methodologies, the course explores unique medical needs of vulnerable, underserved populations internationally and locally. Guest speakers discuss topics including refuge health, homelessness, humanitarian aid in conflict zones, care of military veterans, global health development, care of migrant farm workers, and more.

Dr. Jason Prystowsky MD, MPH Emergency Physician, Santa Barbara Cottage Hospital

**INT 175 - Healthcare Delivery**

This unique course is directed to those upper division students interested in health professions and who should understand the important issues related to health care delivery in the US. Guest speakers will address the economics and models of health care delivery as well as other topics to include quality control, the Affordable Care Act, the ethics in decision making and more.

Paul Jaconette, MPH, Chief Operations Officer, CenCal Health

**INT 184KF—Biomedical Research and the Media - Navigating the Headlines**

This week's sensational headlines - A Cure for Cancer! A Gene for Autism! Deadly Bird Flu! - often cause confusion and, sometimes, mistrust in the scientific process. We will explore how the basic biomedical research process works and then track what happens between the bench science and how it gets reported (or not) to the public. We will assess current news stories and research papers as well as some classic historical examples. The seminar is designed for non-science majors, but all are welcome!

Professor Kathy Foltz, Molecular, Cellular, and Developmental Biology, UCSB

The following courses are based in the Humanities and have a medical component or focus. These courses can also be used to meet the elective unit requirement for the PaCE Medical Humanities Certificate Program. Course descriptions are available via GOLD.
